Business Sales & Performance Analysis

Project Summary & Supporting Documentation
Python • Pandas • Matplotlib • Google Colab

Project Overview

A Python-based business analytics project that evaluates a fictional company's sales over six months. It examines revenue, costs, profitability, product performance, and monthly trends to demonstrate how data can support management decisions.

Key Features

Analysis	Purpose
Financial performance	Calculates revenue, total cost, profit, and profit margin.
Product comparison	Compares units sold, revenue, costs, and profit by product.
Monthly trends	Tracks revenue and profit across six months.
Data visualization	Uses charts to communicate business performance.
Management insights	Generates initial recommendations from the sample results.

Technologies Used

Python for implementation; Pandas for data manipulation and analysis; Matplotlib for visualizations; Google Colab as the development environment.

Sample Results

Metric	Result
Total units sold	302
Total revenue	$160,400
Total cost	$116,240
Total profit	$44,160
Overall profit margin	27.53%
Highest-profit product	Phone
Highest-revenue month	June

Business Concepts Demonstrated

Business Analytics • Financial Analysis • Performance Evaluation • Strategic Planning • Data-Driven Decision Making
